

Question 5: Reverse Array Using Pointers

Scenario:

Write a program that reverses the elements of an array in place using pointers.

Constraints:

- The number of elements, nnn , is between 1 and 100.
- Each element is an integer between -1000 and 1000.

Input:

The first line contains an integer nnn , the number of elements. The second line contains nnn integers separated by spaces.

Output:

The elements of the array in reverse order.
