

Question 5: Formatted Output

Scenario:

Write a program that reads a hexadecimal value as input and prints the number in decimal, octal, and uppercase hexadecimal formats with a width of 5 (padded with spaces if necessary).

Input:

A single hexadecimal value.

Constraints:

1. The input hexadecimal value should be within a 4-digit limit (0 to FFFF).

Output:

Print three lines:

1. The decimal representation.
2. The octal representation.
3. The uppercase hexadecimal representation, all with a width of 5.
