

Bank Loan Eligibility

Scenario:

A bank decides loan eligibility based on two factors: age and monthly income.

- Age must be 18 or older to qualify.
- If the applicant is between 18 and 25, monthly income must be at least 5000.
- If the applicant is between 26 and 40, monthly income must be at least 10000.
- If the applicant is older than 40, monthly income must be at least 15000.

Write a program to determine if the applicant is eligible.

Constraints:

- $18 \leq \text{age} \leq 60$
- $0 \leq \text{monthly_income} \leq 50000$

Input:

Two integers: age and monthly income.

Output:

"Eligible" if eligible, otherwise "Not Eligible".
